

# NBMR

Recover systems directly from  
NetWorker backups

With Cristie NBMR you can protect critical servers from the consequences of failure or disaster by recovering them directly from your Dell EMC NetWorker backups. Recover your protected servers, including operating systems, applications, user configuration and data, to any point in time provided by NetWorker. NBMR is managed through the [Cristie Virtual Appliance \(VA\)](#).

## Highlights

**Integrated system recovery**

**Point in time recoveries**

**Support for multiple OS and cloud**

**Recovered system identical**

**Fast recovery times**

**Flexible recovery targets**

**Remote management**

**Recommended solution**

## Features

- ✓ Leverage existing NetWorker backups without extra infrastructure or management
- ✓ Recover to any point in time provided by the NetWorker backups
- ✓ Supports Windows, Linux, AIX and Solaris and dissimilar hardware, virtual and cloud environments
- ✓ Recover entire workloads including OS, applications, data and configuration information
- ✓ Improve recovery time objectives by restoring your server in as little as ten minutes. Multiple servers can be recovered simultaneously
- ✓ Recover to a range of system recovery targets
- ✓ Manage multiple, simultaneous system recoveries on site or remotely
- ✓ NBMR is a recommended recovery solution for NetWorker

## Benefits

- ✓ Saves storage space, network bandwidth, processing power and management resources
- ✓ Recoveries can be rolled back to a time before the disaster occurred
- ✓ Most systems can be protected using NBMR
- ✓ The recovered machine does not need to be calibrated and tuned to run as it did before
- ✓ Meet aggressive service level agreements recovery time and point objectives
- ✓ Flexibility to suit most environments
- ✓ Easy, secure, mobile access
- ✓ NBMR is re-sold globally by Dell EMC and its channel partners as a recommended recovery solution for NetWorker

*Support is very cooperative and give a timely response to any technical issues raised with them. Your efficient team and NBMR makes my IT life easy.*

## How it works

NBMR allows you to perform a complete bare machine recovery of your system direct from a NetWorker backup. It also provides recovery assurance as the software can be scheduled to run through a complete recovery process. This fully automates the creation of the recovered machine and then runs test scripts to verify integrity and functionality. Schedules can be set up months in advance and planned so that the entire server infrastructure is tested over the course of the desired time frame.

The recovery machines are held in an isolated network and can be released after every simulation so that storage is not permanently required. Detailed reporting highlights any problems encountered and provides an audit trail of successful results.

Perform a recovery by following this simple process:

1. Install NBMR on the client system to be protected.
2. License the software using a trial or full license. The software will then gather configuration parameters, including details about the hard disks, operating system, storage controller, network adapter and network settings. Some of these details can be tailored.
3. Perform a standard NetWorker backup.
4. Boot the recovery environment on the target system and monitor the automated restore process.

### OS Support

With support for the latest and legacy Windows, Linux, AIX and Solaris operating systems. Protect your entire estate with our trusted NetWorker recovery solution.

### Dissimilar Environments

With our unique dissimilar environment technology, you can recover to any physical, cloud or virtual environment.

### Automation

In a disaster recovery scenario, you don't have time to sit and recover each server manually. NBMR supports fully automated recoveries via the Cristie Virtual Appliance or standalone.

## System requirements
